"The Rainbow's Rival"

A SELECT LIST OF THE FINEST

OLD AND NEW VARIETIES

AND

THE BEST OF THE RARE NOVELTIES

as contained in

THE IRIS GARDEN

of

ROY GOTTSCHALL

210 Summit Street, Marion, Ohio

1931

YOU ARE CORDIALLY INVITED TO VISIT THE GARDEN

You will find the Iris a wonderful companion plant to any other hardy planting, whether it be peonies or a general planting of herbaceous perennials. Fifty clumps of all different Iris would not be too many in anyone's garden. By the use of early, medium and late bloomers, using the tall bearded varieties only, the flowering time can extend from May 5th to June 5th. The dwarfs are earlier, the Japanese later and specie Iris interwoven between the earliest and latest.

American Iris Society ratings are given following the name if available. Some have not been rated. It must be remembered that the finest in a certain color may not rate above the 80's but still be the best in that particular color.

Cash with order, please. Shipments prepaid. Stock guaranteed true to name. Prices cover a strong single root and from then on we make no further guarantee as to growth, since we have no control over conditions existing in a customer's garden. An open sunny place is preferred, never in shade or marshy ground.

Deliveries made after July 1st. Different varieties have roots of different size, the yellow's most always small.

SPECIAL COLLECTIONS RECOMMENDED
ORIGINATOR OF "ELITE" STRAIN DELPHINIUM
SEED \$1 PACKAGE, CHOICE PLANTS AS LOW AS \$1 EACH

The primary purpose of my collection of Irises is not a commercial one. Beauty, permanence, hardiness, pleasure and many other reasons have been taken into consideration in the collection of this desirable and many colored flower. Unlike roses, they do not hesitate to increase with fair rapidity, and I am therefore taking this means of sharing them with flower and garden lovers who appreciate the opportunity of adding some really valuable new plant material to their garden, whether it be a hundred acre one, or simply a cultivated space next the garage. The collection has increased by leaps and bounds, and 1931 will see at least 75 per cent of the many varieties in bloom.

In the following descriptions whenever "and" is used in the color combinations it indicates that the color given before it relates to the standards of the flower, while the color directly after the "and" refers to the falls of the flower. A "self" indicates the flower to be of the one color designated. Height given in inches in every case.

TALL BEARDED IRIS.
